Context- and Content-adaptive Communication Networks

macacac  - Mobile context-Adaptive
CAching for COntent-centric networking

4th CHIST-ERA Project Seminar

March 19, 2015. Madrid, Spain

MACACO - Context and Motivation

The smartphone phenomena

Smartphones have the potential to be:

visually-aware
sonically-aware
always-connected
directionally-aware
location-aware
motion-aware

+

=

In 2013, 4.1 billion users worldwide

- New potential for wireless and pervasive applications
- Increasing volume of mobile data between 2014-2018
 - “...worldwide mobile data traffic will increase nearly **11-fold** over the next four years and reach **an annual run rate of 190 exabytes** (10^{18}) by 2018...”
 - 54% of mobile connections will be ‘smart’ connections by 2018

Customers Angered as iPhones Overload AT&T

By JENNA WORTHAM

Published: September 2, 2009

Slim and sleek as it is, the iPhone is really the Hummer of cellphones.

Data offloading solutions are required to deal with such increasing volume of mobile data traffic.

The Great Radio Spectrum Famine

Mobile broadband is consuming more spectrum. Serving up more won't be easy.

Data offloading :

use Wi-Fi/small cell access instead of 3G if possible

iPhone overload: Dutch T-Mobile issues refund after 3G issues

It's not just AT&T. T-Mobile in the Netherlands offers the iPhone and it's now ...

by Jitsch van Beijnum - June 7 2010, 4:16pm KST

Of the three mobile network operators in the Netherlands, only T-Mobile sells the iPhone. And only T-Mobile has a large part of its customer base irate from lack of 3G data access, dropped calls, and calls going directly to voicemail even with full 3G coverage.

- Current data offloading solution:
 - Use WiFi connectivity if available and if not, use 3G.
- Our focus : a more intelligent data offloading strategy
 - Build data offloading mechanisms that take advantage of **context** and **content information**

- Intuitions:
 - to **extract** and **forecast** the behaviour of mobile users in the three-dimensional space of **time**, **location** and **interest**
 - ‘**what**’, ‘**when**’ and ‘**where**’ users are pulling data from the network
 - to **pre-fetch** the identified data and **cache** it at an earlier time
 - at the mobile terminals or at the edge nodes of the network

1. To acquire real world data sets to model mobile node behaviour in the **three-dimensional space** : Originality
2. To derive appropriate models for the **correlation between user interests and their mobility** : Originality
3. To derive simple and efficient prediction algorithms to forecast the **node's mobility and interests** : Originality
4. To output data pre-fetching mechanisms
 1. To integrate content-centric caching approach with social context awareness and opportunistic resource availability : Originality
5. To design a federated testbed for (no commercial interest):
 1. Content and context data collection
 2. Assessment of off-loading solutions

MACACO Project organization

- 6 international partners
 - INRIA coordination
 - 5 European partners and 1 Brazilian Institution
 - INRIA, N7, SUPSI, UOB, CNR, UFMG
 - 4 funded and 2 non-funded institutions
 - Funding organizations: ANR, SNSF, EPSRC
- Funding ~1M€ for a total effort of 277 MM

Brazil

Data collection						
Large scale data generation						
Context prediction models						
Social network analysis						
Opportunistic protocol						
Protocol performance evaluation						
Testbed experimenting						
Protocol standardization						

Nov 2013
Kickoff, Paris

Nov 2014

Nov 2015

Project Seminar, Madrid-> Focus on WP1 and WP2 in this presentation

- **Goal:** providing datasets coupling mobile users' movement patterns & service demand (*unavailable to date!*)
 - Collection of a significant **real-world** data sample
 - Small-scale (~100 smartphones with dedicated monitoring software)
 - Generation of **synthetic** mobility/usage datasets
 - Large-scale (order-of-thousand simulated users in urban scenarios)

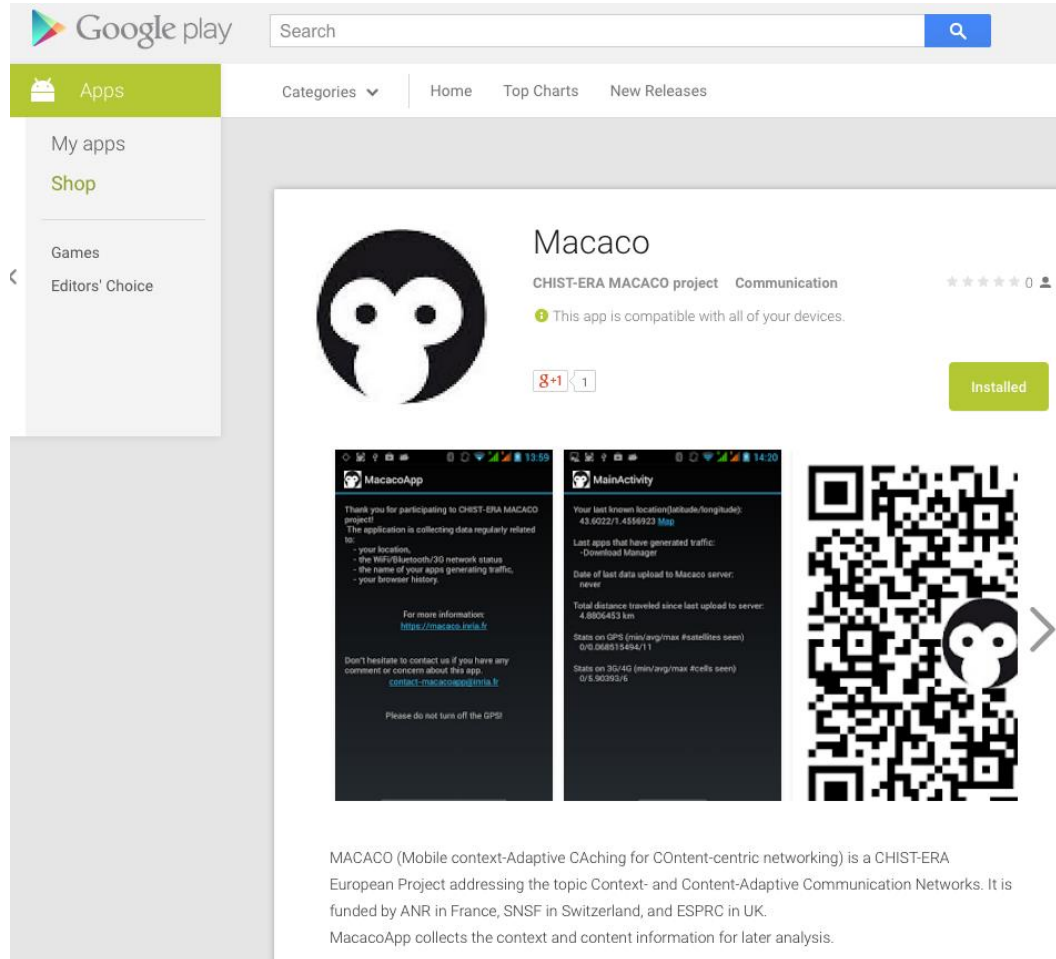

- To configure smartphones to **continuously** collect user's context and content information
 - **Context** = location, networking environment (3G, WiFi, BT), motion (accelerometer, proximity)
 - **Content** = apps that have created traffic in up and downlink, native browser URLs
- The testbed may be composed of users:
 - Using the acquired MACACO smartphones
 - Using their own smartphones with the deployed application installed
 - Incentivizing Android users (work colleagues, students, family, etc) to participate of the testbed
 - The **same application** for the two cases
 - In the **5 countries of MACACO**

Macaco testbed and infrastructure for WP1:

- Software developments for data collection:
 - **Final version of data collection application** for Android smartphones is available
 - Energy consumption optimization
 - Data storage optimization
 - Included survey on **Personality traits** (Big Five questionnaire)
 - Client – server application for **uploading** gathered data
- Complete backup architecture (Servers in Toulouse and Paris)
- **Anonymity and privacy issues** handled according to best practices in EU with CNIL (French privacy body)
 - Data encryption on the phone,
 - User privacy with Hash SHA256,
 - Secured communication of app with Macaco servers.

- MACACO App available for Android

MacacoApp
Thank you for participating to CHIST-ERA MACACO project.
The application is collecting data regularly related to:
- your location,
- the Wi-Fi/Bluetooth/3G network status
- the name of your apps generating traffic,
- your browser history.
For more information:
<http://macaco.inria.fr>
Don't hesitate to contact us if you have any comment or concern about this app.
contact.macaco@inria.fr
Please do not turn off the GPS!

MainActivity
Your last known location(latitude/longitude):
43.6022/1.4556923 [Map](#)
Last apps that have generated traffic:
- Download Manager
Date of last data upload to Macaco server:
never
Total distance traveled since last upload to server:
4.806453 km
Stats on GPS (min/arg/max #satellites seen):
0/0.068515454/11
Stats on 3G/4G (min/arg/max Accts seen):
0/5.90393/6

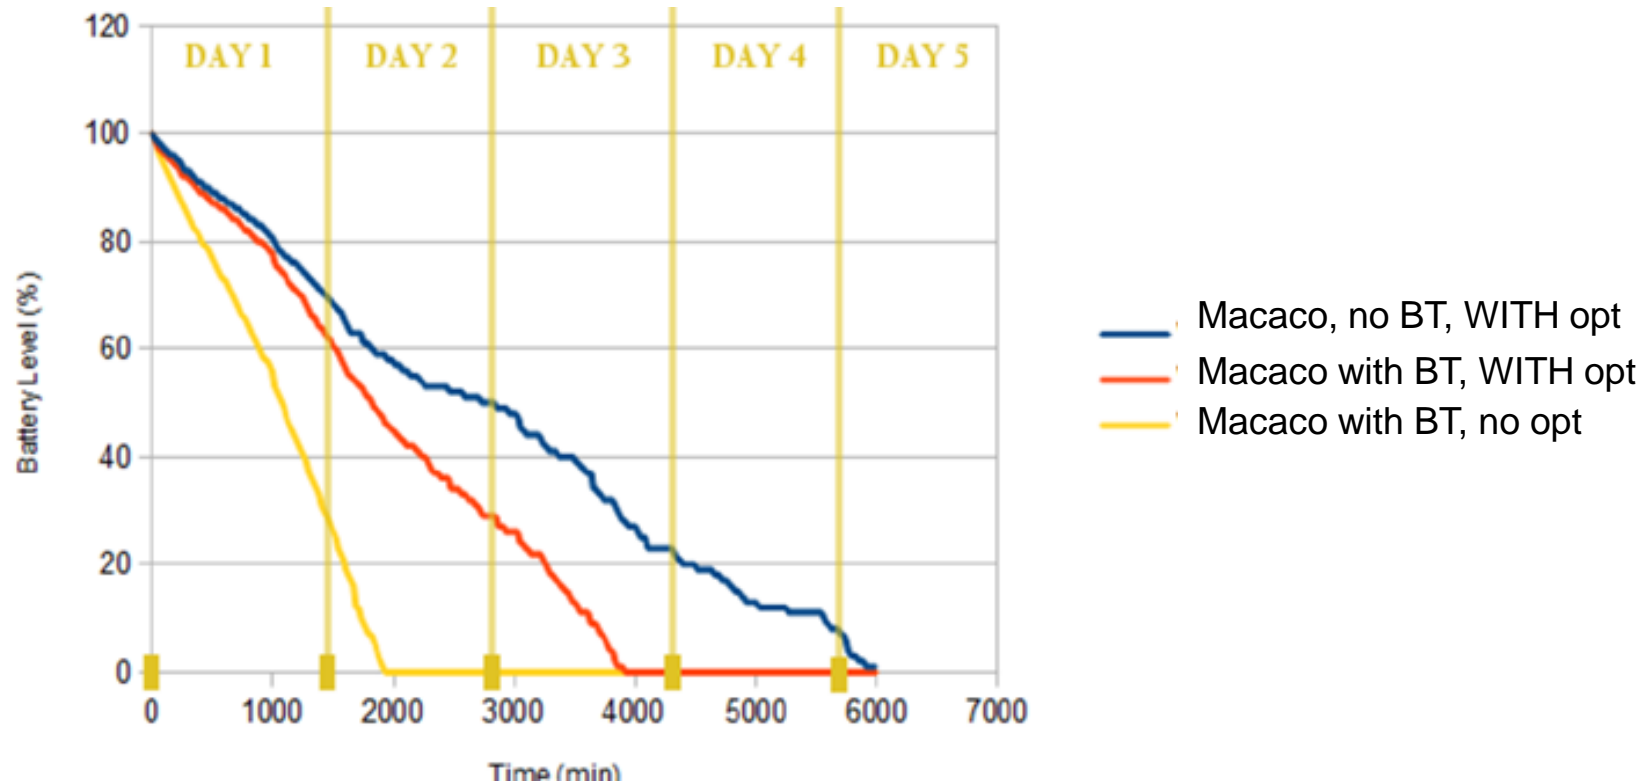

MACACO (Mobile context-Adaptive CACHing for Content-centric networking) is a CHIST-ERA European Project addressing the topic Context- and Content-Adaptive Communication Networks. It is funded by ANR in France, SNSF in Switzerland, and ESRC in UK. MacacoApp collects the context and content information for later analysis.

Macaco App: Design of an energy optimization heuristic

- If no mobility then no GPS measurement

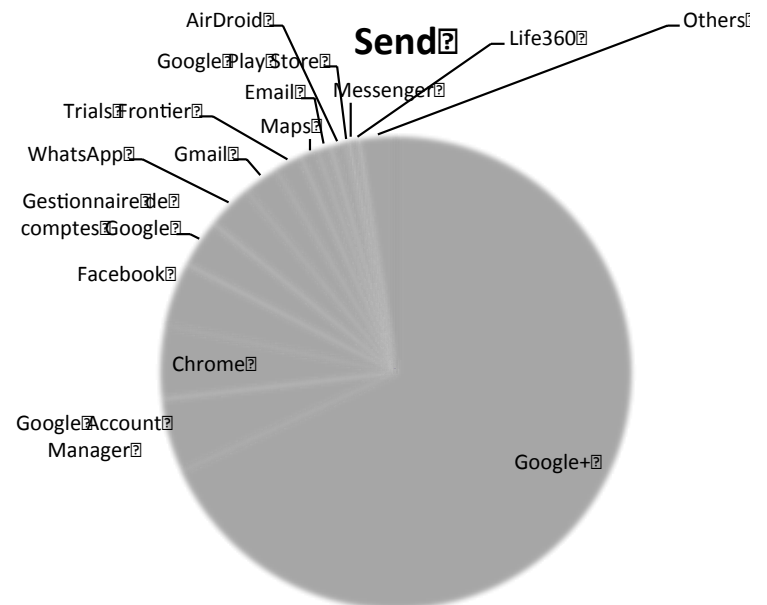

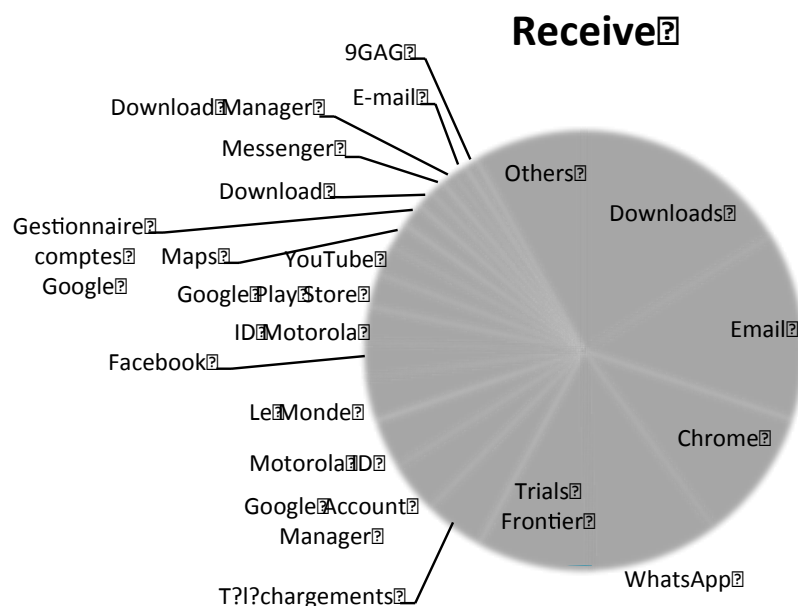

Results

- Impact of Bluetooth is really important
- Real energy savings.

- Deployment and data collection
 - Delayed because of longer than expected App development.
 - Main data available by summer 2015.
- First data available
 - Measurements with 9 phones for 3 days at ACM/IFIP/USENIX Middleware conference in December 2014
 - Colleagues / project member testings
- Upcoming deployment
 - Will be launched by all partners of the project
 - Several incentivizing methods will be tested
 - Lend a Macaco smartphone to students for 6 months to 1 year, pay data plan.
 - Reimburse personal data plan if Macaco is being used
 - Lottery to have users participate for a minimum amount of time to the experiments

- 1st version, 24/4/2014 - 15/6/2014, 11 devices, 938 measurements
- 2nd version, 11/7/2014 – 12/3/2015, 31 devices, 411321 measurements
 - 2669 IP v4 addresses, 9131 Bluetooth addresses,
 - 59384 Wi-Fi addresses (29160 names)
 - 4717 Browser History
 - Apps generate traffic: 122, receive/send 10551/3798 MBytes

- Requires the data of WP1
- Studies have already started using other data traces
 - that however lack the complete content description of Macaco
- First modelling results have been published:
 - A framework for profiling access network state from measurements of the mobile traffic generated by subscribers [Infocom 14].
 - A measurement-driven modelling of mobile data traffic usage of smartphone subscribers from a large-scale dataset collected from a major metropolitan 3G network [Percom 2015]
 - RECAST algorithm to classify dynamic user interactions by separating random ties from social ones [MSwim 2014]
 - Code offloading on opportunistic computing. [Percom Demo 2014]
 - Investigation of human mobility in terms of relevance, time and distance. It analyses the variables that characterize the way humans move among Pols. [IEEE PerMoby workshop 2014]

- Timeline related to WP1.1
 - March 2014 : Version 1.0 of data collection application
 - April 2014 – May 2014: Alpha version app tests at N7, UOB and SUPSI
- Timeline related to WP2.1 and WP1.2
 - Manpower WP1.1/WP1.2
 - 3-month internship at N7 for data application development finalization (March-May 2014)
 - 3-month PhD at N7 support for supervision and roll out of data collection testbed, first analysis (May-July 2014)
 - Manpower WP2.2
 - Post-doc recruitment at UOB to start in April 2015
 - 3-years PhD at INRIA to work on datasets modeling (not funded by Macaco)
 - 6-month internship at INRIA for data modeling (May-Nov. 2015)
 - Manpower WP3
 - 12-month post-doc at N7, started in January 2015

Partner	Person.months	Total costs	% of requested budget
INRIA	12.07	62,146.85 €	39.5%
N7 (INP Toulouse)	18	32,664 €	22%
University of Birmingham	2	16,771.93 £	5%
SUPSI	16	97,698.76 CHF	25%

The UK partner, Mirco Musolesi, is joining University College London in June 2015

- GranData company collaboration
 - bringing cellular datasets access to MACACO
- PRIVA'MOV project (IMU LABEX), **Marco Fiore (CNR) implication**
 - Goal: to develop and deploy a privacy-aware crowdsensing platform to collect mobility traces from real users
 - Collaboration already started
 - MACACO will share data collection and analysis experiences with PRIVA'MOV participants
- GOMOBILE project (N7 and LPT lab (Theoretical Physics Lab, Toulouse))
 - Accepted project : Google Matrix analysis of dynamic networks
 - 3-year PhD related to WP2 of Macaco.
 - Funding : Toulouse University and Region Midi-Pyrénées

Date	Location	Purpose
Nov 25, 2013	Paris	Kickoff
Feb 3, 2014	Skype	Data collection application
Apr 25, 2014	Skype	Data collection application
May 21, 2014	SUPSI, Lugano	First semester meeting
Jun 18, 2014	Skype	MACACApp development and legal issues
Jul 1, 2014	Skype	MACACApp development and legal issues
Oct 21, 2014	CNR, Torino	Second semester meeting

- Delayed WP1 (**6 months** delay)
 - Difficulty to hire full-time developers for app development
 - Long management of legal / privacy issues related to data collection
 - Shift in funding start for a partner (UOB)
 - Main risk already highlighted in the proposal
- WP2 has still started on time with **other real-world datasets**
 - That miss a good description of the content of exchanges
 - But that can be easily improved with Macaco data
- WP2 and WP3 have started with two post-docs in 2015 and 1 PhD
 - Jan 2015 – Feb 2015 : post-doc at N7
 - Apr. 2015 – April 2016 : post-doc at UOB
 - Oct 2014 – Oct 2017 : PhD at Inria

(Edit Page)

MACACO is a CHIST-ERA European Project addressing the topic Context- and Content-Adaptive Communication Networks. It is funded by ANR in France, SNSF in Switzerland, and EPSRC in UK.

It focus on data offloading mechanisms that take advantage of context and content information. Our intuition is that if it is possible to extract and forecast the behaviour of mobile network users in the threedimensional space of time, location and interest (i.e. 'what', 'when' and 'where' users are pulling data from the network), it is possible to derive efficient data offloading protocols. Such protocols would pre-fetch the identified data and cache it at the network edge at an earlier time, preferably when the mobile network is less charged, or offers better quality of service.
