Project Factsheet

CIMPLE: Countering Creative Information Manipulation with Explainable AI

April 2021 - March 2024, 1.1M€ funding

<https://www.chistera.eu/projects/cimple>

<https://www.cimple.eu/> (to be launched this month)

Project Objectives

Objectives:

- ❖ XAI requirements related to AI-driven misinformation detection
- ❖ XAI by design using Knowledge Graphs
- ❖ XAI models for detecting information manipulation
- ❖ Generate creative and engaging explainability visualisations
- ❖ Personalize XAI to end-users skills and topic affinity

Perceptions and Explanations

Politifact

Facebook posts
stated on July 8, 2020 in on social media:

Only 56 coronavirus deaths a day was enough to collapse the world economy, even though thousands of people die daily from tuberculosis, hepatitis B, and other diseases.

Viral image

stated on June 17, 2020 in a Facebook post:

“Four kids who took the coronavirus vaccine died immediately.”

HEALTH / CORONAVIRUS

This letter claiming to be from a doctor in Surrey is full of errors

23 JULY 2020

WHAT WAS CLAIMED

A letter from a consultant at a hospital in Surrey claims that hospitals are empty and that there is no pandemic.

OUR VERDICT

There are numerous inconsistencies in the letter which suggest it is not from someone working at a hospital in Surrey.

Requirements: Preliminary Results

- ❖ Content type: letter, opinion
- ❖ Endorsement (accountable organisation)
- ❖ False claims
- ❖ Misleading strategy
- ❖ Fallacy detected

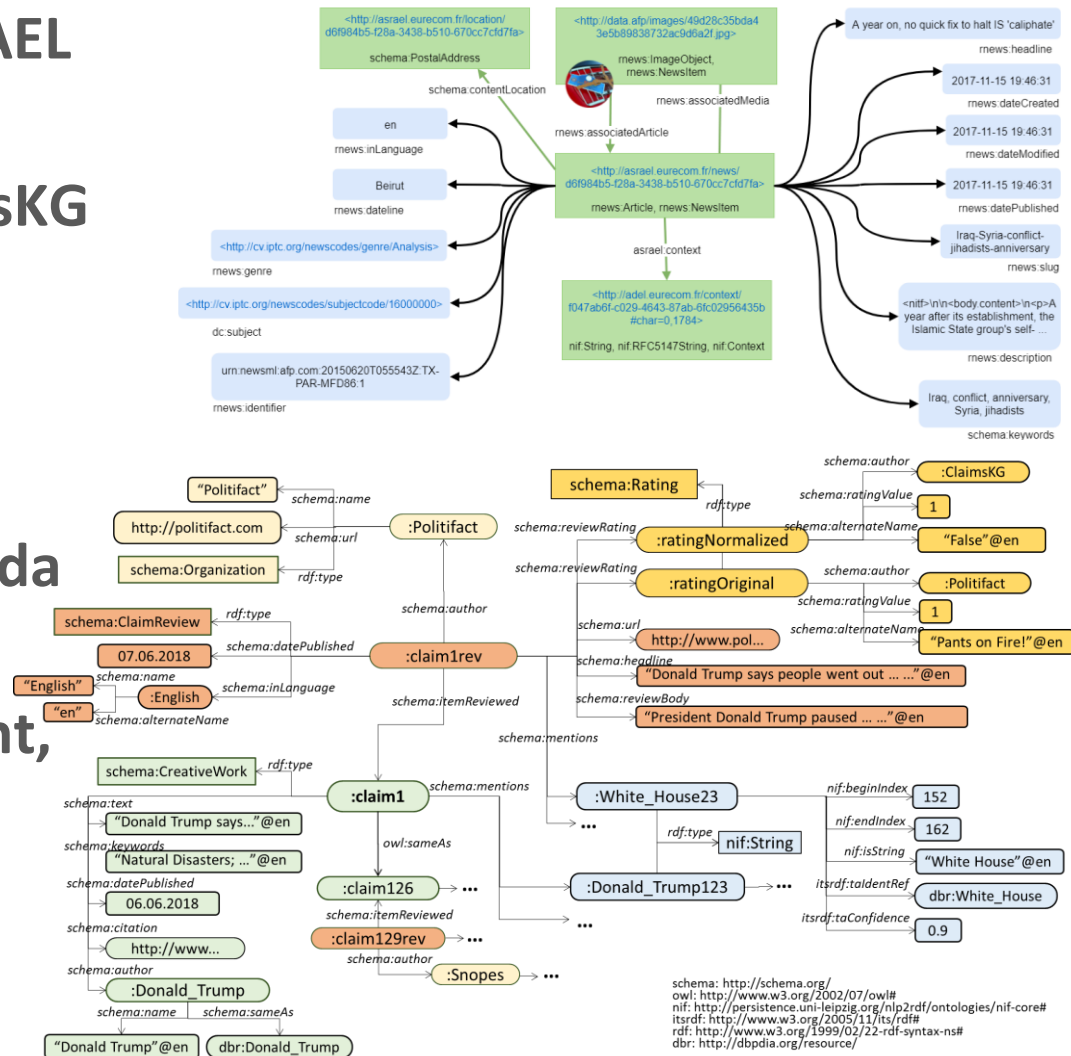

Reasons to NOT believe

Reasons to believe

- ❖ KG of news items - ASRAEL
- ❖ KG of claims (and fact-checked claims) – ClaimsKG
- ❖ Domain-specific KG
 - ✓ Covid-19
 - ✓ Climate Change
- ❖ Vocabulary of propaganda techniques
- ❖ Vocabulary for sentiment, emotions, bias

OPINIONS, INTENTIONS, FREEDOM OF EXPRESSION,
... , AND OTHER HUMAN ASPECTS OF MISINFORMATION ONLINE

CHI 2021 - May 7th

<https://events.kmi.open.ac.uk/misinformation/>

ABOUT

Tools and online services are continuously being developed to support social media users, journalists, and policymakers to limit the harm caused by misinformation.

As we have experienced, the expected impact of online solutions is quite often hampered by limitations associated with lack of explainability, complex user interface, limited datasets, restricted accessibility, biased algorithms, among others issues that can confuse, overwhelm, or mislead users in their own ways. These limitations lead to **ethical implications that are typically neglected when new digital solutions to tackle misinformation are conceived**. As a wicked problem, limiting the harm caused by misinformation requires merging multiple perspectives to the design of digital interventions, including an understanding of human behaviour and motivations in judging and promoting false information, as well as strategies to detect and stop its propagation without unduly infringing on rights or freedoms of expression.

This hands-on workshop proposes to **unpack the state-of-the-art on social, societal and political studies, as well as socio-technical solutions to stop misinformation**, challenging the participants to

Role of the CHIST-ERA Support

Interdisciplinary nature of the research

- ❖ Knowledge graphs for XAI
- ❖ Misinformation
- ❖ Story evolution and visualization
- ❖ Psychology of explanations
- ❖ Computational creativity
- ❖ User-based co-creation and evaluation

Responsible research and innovation

- ❖ Open science, open source development, sharing datasets
- ❖ Numerous scientific challenges are organized
