University of Geneva

1. Who are we
2. Activities
3. The idea

Who are we

- Created in 2016
- 7 members (4 seniors, 3 PhD students)
- 3 active H2020 projects
- 2 upcoming Horizon Europe projects
- Strong focus on Cyber Security and Data Privacy
- Multidisciplinary:
 - Internet of Things
 - Connected Automated Vehicles
 - Smart Cities and Infrastructure

University of Geneva Founded in 1559 by Jean Calvin. With 19 000 students & 150+ different nationalities. Composed of nine faculties and supporting multiple centres and institutes.

Geneva School of Economics and Management. The faculty is committed to a broad-based, multidisciplinary approach to the sciences of economics and management and is host to several institutes.

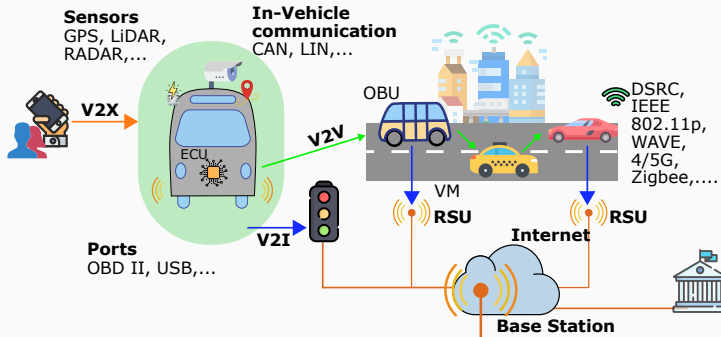

Information Science Institute. Hosting seven Laboratories.

- 30 staff members, 25+ active research projects
- Computer Graphics & Animation, Services for seniors, Geolocalisation, Cloud computing, Ecosystem of Services, Autonomic Systems, Privacy, Security, Services and Applications' Integration, Mobile systems and services
- Interdisciplinary approach to the systematic innovation in service systems.
- Large, international scientific and commercial partners' network
- Located at the Intrafaculty Computer Science Centre CUI (Batelle campus).

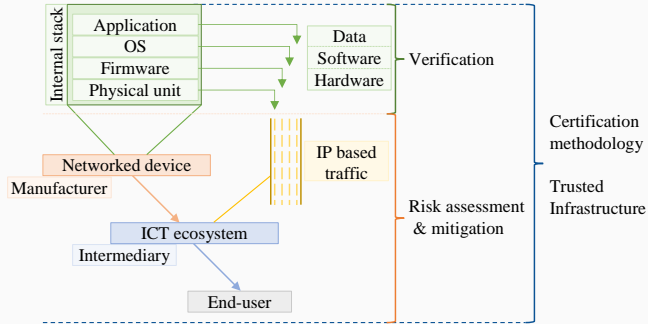

Activities

The idea

- Automate S&P certification and verification of IoT devices and its software components
- Audit the processes and procedures upon key relevant standards and regulations leading to required certifications
- Incorporate chain of trust
- Establish S&P governance and compliance framework

Keywords: Cybersecurity audit, trust, IoT, ICT systems, risk assessment, blockchain, verification, consensus networking, anomaly detection, behaviour profiling

Verify the data generation and access capabilities of network devices.

- Automation of decision
- Control the balance between S&P compromise in terms of:
 - Embedded services usability
 - End-users' expectations
 - Cyber risks perception

Leveraging two domains: cybersecurity and risk assessment.

- Continuous and automated identification of (ongoing) attacks
- Evaluation of the likelihood of associated risks
- Dynamic appointment of mitigation strategies for threat prevention
- Integrity of firmware and software with the help of certification schemes and consensus agreements.
